

GEORGIA'S VOTER ROLLS HAVE MAJOR PROBLEMS

- **Dr. Jerome Corsi's Research and Expertise:** Renowned political scientist and best-selling author Dr. Corsi will discuss the algorithm discovered by Dr. Andrew Paquette, which identifies cloned voter records in seven states, including Georgia. His research highlights over 500,000 cloned voters on the rolls. Dr. Corsi has authored over 30 books, including two #1 New York Times bestsellers.
- **Mike Nixon's Findings on Clone Votes:** IT professional and State Director for United Sovereign Americans, Mike Nixon, will present data on cloned votes in Georgia and other states. Research indicates over 500,000 cloned voter records in both the 2020 and 2024 elections.
- **Dr. Rick Richards' Data Integrity Review:** Dr. Richards, a family physician with 40 years of experience in large population data management, will share findings from EagleAI NETwork's review of Georgia voter registrations. His analysis reveals ERIC's failure to fulfill its mission, resulting in less accurate voter rolls.
- **Legislative Action on HB215:** Exiting ERIC is a good start. However, the legislature need to acknowledge the problem of ineligible voters and cloned records instead of being misled by the Secretary of State.
- **Call for Comprehensive Reform:** Experts agree that simply cleaning voter rolls is insufficient. A complete overhaul of the voter registration system is necessary, including removing underlying algorithms and starting fresh to ensure data integrity and election security.
